

Implementing The Plan

I wrote a detailed spec of what I wanted and let OS Agent do the rest.

After testing basic functionality, I went to implementing the new UI.

```
# Implementation Summary: Swipe Navigation & UI Fixes

**Date:** December 11, 2025
**Status:** ✅ Completed
**Build Status:** ✅ Successful

---

## Overview

Successfully implemented 4 major UI enhancements to the Couple Scheduler app:
1. ✅ Swipe navigation between 3 screens (Daily, This Week, Next Week)
2. ✅ Removed chevron toggle buttons, centered print button
3. ✅ Fixed heading chevron padding for perfect centering
4. ✅ Updated weekend task styling (empty blue stroke, no letters)

---

## Changes Made

### 1. Swipe Navigation ✅

**New File Created:**
- `/components/SwipeNavigator.tsx` - Main swipe navigation container

**Features Implemented:**
- Three horizontally swipeable screens: Daily View, This Week View, Next Week View
- Touch gesture detection with 50px minimum swipe threshold
- Smooth 300ms snap-to-view transitions
- View indicators (dots) showing current position
- Active: ■ #E026F9 (magenta)
```
